**Presentation**

This peer reviewed special issue of *Brain Injury* captures the main conferences of the 9<sup>th</sup> *International Symposium on Neuropsychology of the Frontal Lobes and Executive Functions* (Angers, France, September 29, 2017). This symposium brought together some of the leading scientists and clinical experts in the field of social cognition in an effort to provide the latest understanding of the issues surrounding this complex question. To enrich this special issue, international experts in the field of social cognition and social communication disorders following traumatic brain injury were also invited. Additionally, the contributors in this special issue are all members of the Social Cognition, Communication and Affect Special Interest Group of the International Brain Injury Association.
